

optomap®

Retinal Exam

During a comprehensive eye exam, our Doctors monitor for retinal complications including macular degeneration, lesions, and retinal holes or detachments. Geneva Eye Care Optometry offers the latest optomap technology with OCT to detect these conditions.

This screening procedure also detects problems in your overall health that may show early signs in the retina such as high blood pressure, high cholesterol, diabetes, cancer/tumors, auto-immune disorders, and many others.

The new OCT technology allows us to scan all the layers of the retina to detect diseases such as glaucoma, macular degeneration or diabetic retinopathy earlier than possible with traditional methods.

The **Optomap**® Retinal Exam:

- ✓ is the doctors preferred method of monitoring your eye and overall health
- ✓ DOES NOT REQUIRE DILATION DROPS
- ✓ allows your doctor to detect the presence of disease **early** in its progression
- ✓ will be saved in your medical file enabling your doctor to make important comparisons during your annual exams

The cost for this procedure is \$65

____ I understand that the **optomap** retinal exam will be performed today and do not have any questions.

____ I want to speak to the doctor for more information and understand that declining this procedure may limit the doctor's ability to optimally assess my ocular health.
